Among newly elected academicians there is a director of the educational and research institute of plant industry, ecology and biotechnology of NUUES of Ukraine - professor M.D.Melnychuk. He became the youngest academian of NAAS for the whole time of its existence.

Officer is a profession of the courageous

Recently foreign councillors at the Ministry of defense of Ukraine and the General staff of the Armed forces of Ukraine have visited the National University of Life and Environmental Sciences of Ukraine, where they got acquainted with training future reserve officers.

Professionalization councillor of the Armed Forces of Ukraine, the colonel Jean-Jacques Delette from France, head of the military cooperation department of the U.S. embassy in Ukraine, councilor on attracting the expert and logistical assistance of the U.S., the lieutenant-colonel Rance Rauchoff, manager of the training program Quercy Kelder from Estonia met with the university leaders, examined the material and technical base of the military chair of the university and communicated with students.

Head of the chair, colonel A.O.Kaletnik, said that NUUES of Ukraine was elected by delegates not by accident. After all, teaching and material base of reserve officers training chair is considered one of the most powerful both in the capital and in all national territories. Today training subdivision has more than 35 class-rooms, where theoretical and practical classes are held. In training students weapons and military equipment are used. In particular: T-64B, IFV-1, IFV-2, APC-80, various automotive machinery, mechanical devices and various types of small arms, etc. As typical example, foreign councillors recognized or armored units, military units, maintenance and repair of basic machines and equipment are used. In particular: T-64B, IFV-1, IFV-2, APC-80, various automotive equipment, mechanical devices and various types of small arms, etc.

After short presentations of Canadian universities, employees of educational and research institutions and faculties of NUUES of Ukraine held consultations with representatives of the universities, their areas of training and research, and cooperation with the activities of their units. In particular, there was a preliminary agreement on cooperation between educational and research institute of plant industry, ecology and biotechnology and the Manitoba University. Joint interest was aroused by the following areas of training and research as varietal resources and technology of growing rapeseed (with subsequent processing into biofuel), technology of organic agricultural production, using animal waste to produce biofuels and biogas, biosecurity issue of genetically modified organisms, the impact of natural factors and technologies of major crops, especially cereals, on quality and food safety, human activities - on quality of natural water.

The EBI of businesses also found their “point of contact” with the faculty of economics of the Saskatchewan University. They discussed possibilities for Ukrainian students in Master and postgraduate's grants, consulting our Masters and postgraduates by professors from the university via the Internet communication technologies, staff information sharing, pointing out their interests for the preparation and implementation of joint research programs in agribusiness, with financial support of international funds (such as CIDA), the possibility of developing and implementing joint master programs.

Universities as bridges of friendship and partnership

Recently, the representative of educational delegation from Canada has visited the university. The president and vice-chancellor of Vancouver Island University, Dr Ralph Nilson, the dean of the Faculty of agricultural and food sciences of the Manitoba University, Dr Michael Tresan, head of the Saskatchewan University, professor William J.Brown, director of the Ukrainian educational and research institute of plant industry, ecology and biotechnology of NULES Ukraine, I.V.Mitrofanova took place, election of NAAS full members being on its agenda.

Recently, the director of Yalta educational and research center of biology and ecology of sub-perennial horticultural crops, which Iryna Verkhovna Rada honored her monograph technical activities. With this award the Crimean Verkhovna Rada honored her monograph "Somatic embryogenesis and organogenesis as a basis for biotechnology and conservation of perennial horticultural crops", which Iryna Mitrofanova wrote alone.

Our information

Vancouver Island University

Founded in 1956, Vancouver Island University is a state higher educational establishment that offers more than 200 bachelor and master's programs as well as programs that offer technical and vocational diplomas and certificates. Students from 40 countries receive an education here.

Vancouver Island University recently have joined the so program of five-years partnership (funded by CIDA) together with Kyje National Taras Shevchenko University and the Institute of geography of National Academy of Sciences of Ukraine to develop and implement an educational program for Ukrainian civil servants.

Access to international electronic resources

In recent years, the availability of information is becoming increasingly important for modern society. Information plays an important role in providing access to information resources owned to libraries, which are an integral part of the information society. However, if the library gave access to information stored in its stocks to external users, today electronic resources such as databases available from the library network are added to printed materials. After all, in our time information is not enough to know on what shelf the book or magazine is in the repository library. They should know on what virtual shelves the document is placed in the global distributed repository, and how to find and get it there.

However, remembering the order “On the publication of the results of the thesis for a doctor and candidate degree”, we the library staff, like anyone else, understand that in order to publish articles in international scientific databases, it is necessary first of all to have access to such resources, for acquaintance with the latest scientific information. It becomes more relevant in connection with the preparation for international accreditation of the university.

Thanks to the cooperation of our library with the Association “Information-Consultant” (whose main mission is to facilitate access to electronic scientific, technical, and economic information for academic, educational and budgetary institutions and organizations in Central and Eastern Europe), a member of international consortium EIFL, an access to such resources became possible.

From February 4 to March 10, NURE’s Ukrainian scientific library the first time have opened free trial access to international scientific database EBSCO PUBLISHING. EBSCO company is one of the largest suppliers of journals in electronic and print format, and its database containing more than 500 electronic versions of well-known scientific journals, most of which are full-text. EBSCO provides the ability to search full-text, reviewed specialized materials of socio-humanitarian, economic, medical, technical and other subjects, by 60 search engines.

As part of a trial access to electronic resources, the university “On the publication of the results of the thesis for a doctor and candidate degree” - as a member of the international scientific database. EBSCO PUBLISHING company is one of the largest suppliers of journals in electronic and print format, and its database containing more than 500 electronic versions of well-known scientific journals, most of which are full-text. EBSCO provides the ability to search full-text, reviewed specialized materials of socio-humanitarian, economic, medical, technical and other subjects, by 60 search engines.

Approximate age of Maksym Zalizniak’s Oak is over a thousand (!) years, and the witness of all these was a unique tree - a centuries-old historic oak of Maksym Zalizniak, born in Medvedivka, located near Holodnyi Yar, who, 1999, suffered heavy damage during attacks and demanded complex medical and security measures. But it was necessary to inspect it thoroughly. Such work, with using of modern methods, was organized and conducted in 2002 and 2008-2010 years. Arboretist of the International society of the study and protection of trees (Poland) gave a significant methodological and practical help in the treatment and rehabilitation of the memorial tree to Ukrainian-Canadian community.

...Holodnyi Yar. Dense forest of trees around Maksym Zalizniak’s Oak is one of the largest uprisings of Cossacks in 1918. They fought against the machine guns of a small armed group of Cossacks in the village of Holodnyi Yar, who, since 1918 till 1933 years, have quite successfully defended the independence of the self-proclaimed republic Holodnyi Yar.

Emergency commissioners have already been certified

Tetiana Bryshko, vice president of the National association of extension services of Ukraine “Donets”

- Farmers are very interested in creation of the emergency commissioners for the agricultural sector and the necessary of their training in renunciation of smoking.

- Majority of insurance companies, professionally engaged in insurance of risks of agricultural production, are already for a long time have specialists in their staff, who carry out inspection of crops during taking insurance, and determine size and damage causes in insurance cases. Or they collaborate with them on insured accident, Insurers or the court sometimes dispute the results of such inspections, that is produced by the lack of a document that gives them the right to make appropriate conclusions, so legislative regulating of this problem is a big progress.

- In a situation where one side pull the blanket on itself, it’s hard to count on cooperation. So if we take into account the fact that they quickly found common ground in approaches to learning and certification of emergency commissioners.

- We hope to see later the independent professional association of emergency commissioners of agricultural insurance. I hope that it will have features of self-regulating organization, and specific powers of regulating relations in agricultural insurance will be delegated by Agrarian pool or regulator. Mostly it is provoked by the lack of a document that gives them the right to make appropriate conclusions.

- In the nearest years, agricultural insurance market will develop rapidly, but the lack of specialists in regulating could turn into a major brake on the construction of its civilized model. Therefore, in my opinion, the operational response to the existing problem of professionals from PC project “The development of agrarian insurance in Ukraine” and national committee of financial services deserves the highest marks. Especially if we take into account the fact that they quickly found common ground in approaches to learning and certification of emergency commissioners.

- I hope to see later the independent professional association of emergency commissioners of agricultural insurance. I hope that it will have features of self-regulating organization, and specific powers of regulating relations in agricultural insurance will be delegated by Agrarian pool or regulator. Mostly it is provoked by the lack of a document that gives them the right to make appropriate conclusions.

British Education and Training Technology Exhibition: ocean of impressions and sea of information

How to improve the knowledge of pupils and students? How to increase their interest and motivation? How to keep their attention on train- ing material? What technical facilities can help in training process? These and other issues had to be answered at the annual exhibition of the up-to-date technologies in education “BETT 2013” (British Education and Training Technology Exhibition) in London, that the postgraduate V.V.Lipska and doctoral candidate V.Tarnausha, representatives of the chair of social pedagogics and information technologies in education, were going back to printed, turned to the experts on this issue and asked them to offer their opinion.

- This exhibition of educational technologies and trainings has been held since 1985. This year nearly 700 companies that produced 150 train- ings for professional development of pedagogues took part in it. More than 30 thousand visitors acquainted with the up-to-date achievements of lead- ing UK and international producers who offer innovative technology solu- tions for improving academic activity and increasing the interest in studies.

- Microsoft Corp. showcased up-to- date products in their new “Spring of Windows 8 and introduced Microsoft Office 5/5, which offers organizations and educational institutions for possi- bilities of cloudly facilities of increasing of efficiency, helping to save time and money, making their work much easier, and saving their programs, including the program “Shape up the future”.

- The British Civil joined with Microsoft company held a briefing of leaders of education, wherein minis- ters and experts in education took part, and discussed the positive results of improving and learning innovations, using new technologies in education. Michael Gove, the UK’s secretary of education said that “the continuing improve- ment of innovation and partnership of the British Civil, in his speech “The opportunities of access to learning language through portable and mobile devices,” told about the benefits of these technologies.

- Microsoft held a number of measures within the program “Partnership in training”, among them organized by the Cornwallis Academy, an overview of innovative schools for sharing training- experience, information to students in forming XXI cen- tury skills, interactive game education- al workshops, a tour with demonstrating modern educational equipment in the nearest future. Partnership in training” offered a complete set of professional facilities that help to make the work of an instructor more productive.

- We set great hopes on practical trainings. It will take place mostly in the fields. Farmers and insurers, who already had to determine the cause of insured events and calculate the volume of damage caused by farmers, will be included to con- ducting of practical trainings.

- It is important for future emergency commissioners to receive the latest information on legislative changes in the agricultural sector and the insurance market. The training program was constructed so that they have such an opportu- nity. So, we pay special attention not only to preparing emergency commis- sioners, but also to their further professional growth.
The first stage of All-Ukrainian student Olympiad on disciplines and training area “ecology” was held at the faculty of ecology and sustainable development.

130 students of 2-4 years of studying took part in it. Students Evhenia Blaize and Natalya Polishchuk gained the first place diplomas in general ecology, II and III diplomas - Irena Vlaseko and Yuliya Syl’yanenko correspondingly, Roman Babka, Natalya Demchenko and Mirohampa Skana showed the best knowledge of nature economics, and Andrey Tverk, Olena Porfliz and Yuliya Sykh - of life safety. Victoria Sled, Natalya Demchenko and again Roman Babka distinguished themselves in training area “ecology.”

With eyes of young scientists

The international student scientific conference “Prospects for agricultural higher education with the eyes of young scientists” was held on the base of the Nizhynsky Agrotechnical Institute. More than 150 students from 17 universities of Ukraine and colleagues from Belarus, Kazakhstan, Russia, Poland and Denmark took part in it. 98 reports were presented at the plenary and section sessions. Participants considered the results of student research works at three sections in the following areas “Scientific and technical progress in the development of higher education in Ukraine,” “The latest technologies as constituents of economics and society”, “Humanitarian constituent of making qualified experts”, “Educational innovations and making favourable social environment”, learned about higher education in other countries from foreign participants - colleagues-students, about possibilities of participation, grants and scholarship programs that today allow implementing the results of their own scientific work in practice. It is important that students themselves proposed innovative ways of developing higher agricultural education, taking into account the experience of foreign universities and insisting on the maximum applied nature of scientific research.

The forum “Increasing of interactivity of subjects of the rational economy as the key to future stability of the state” took place in the course of the conference. The forum was joined by representatives of agricultural holding “Strip, “Dnipro-Sov” and “All-Ukrainian Association of student self-government” and “Student republic.”

Heroes of Kruty in human memory

Ukraine marked the 95th anniversary of the deed of Kruty heroes.

This deed of the Ukrainian youth has been engraved with golden letters in the pages of our history forever. On January 29, 1918, at the railway station the detachment of Ukrainian People’s Republic numbering 500 Kyiv cadets, students and gymnasium students, and the army of 4000 Bolsheviks led by Mykhajlo Mazuryn clashed in confrontation. New to war youth failed to stop the enemy, but the battle in Kruty became one of the symbols of the heroic struggle for Ukrainian independence, self-sacrifice for their Fatherland. The event participants witnessed that the Ukrainian unit lost more than 250 warriors. The names of 27 youngeros, who got lost in the snow storm, were captured and executed, are well known. Their bodies were later solemnly reburied in the Askold grave in Kyiv.

The delegation of the Bar Automobile and Road College of the National Technical University “IUT” visited our institute to commemorate the Kruty heroes. The concert of a young Ukrainian kobzar Victor Pashnyk who alone for an hour and a half was keeping the audience in suspense became a peculiar gift for our hearty hospitality.

“The round table” was held next day. The floor was given to the students who told about their educational establishments and the occupation of their student self-government.

Joint delegation went to the meeting-requiem to the memorial of the Kruty heroes in the village of Patima of the Borzanska region, where they bowed their heads to the deed of young heroes-patriots. Students and the institute employers also participated in the gala concerts that were held the same day in the Kruty and Nizhyn houses of culture.

“I know the power of a word…”

The evening of poetry was held for those who could not imagine their lives without poetry. It brought together students, faculty and staff of the university. They were reciting poems about love of both well known poets and their own. Listening to these heartfelt lines you arrive at the idea that the power of words is as boundless as our life. And love is the best word that encourages us to actions, gives us confidence in our happy future.

“With eyes of young scientists”

The first stage of All-Ukrainian student Olympiad on disciplines and training area “ecology” was held at the faculty of ecology and sustainable development.

“Round table” “Experience of student organizations of the Wageningen University for NULES” with the participation of a representative of the Wageningen University (Netherlands) Robin Smalle and NULES of Ukraine students was held.

Our guest spoke about the structure and organization of student organizations and mainly about the role of students in the educational process at the Wageningen University. There isn’t any single student organization there like ours. But there are more than 20 student organizations in Wageningen, each of them having their own direction and adherents. Our students also have separate student organizations, their activity mostly dealing with arranging social projects, youth leisure, etc., and not academic activity, and the rest - with training programs (they can actually be compared with our faculty student organizations). The last ones arrange events for students of a certain training program.

As we have learned, students’ ideas in Wageningen play a crucial role in shaping the training quality because there is permanent transparent feedback mechanism between them and administration decisions are made, taking students’ thoughts into account. There is even a special Student Council - a kind of “party” that represents and defends the interests of students. It’s interesting that occupying a leading position in it (or in any other big student organization), a student takes a break from studying and works in this position for a year and gets official payment for it.

It was also interesting to learn about the activity of the organization “Green Office Wageningen”, its main task - establishing high-quality communication among the university divisions in its territory: from organizing educational events on proper sorting of waste to developing a system of more environmentally friendly means of moving from Wageningen to the country main airport - Schipol.

Our students had a lot of questions basically on the methods of involving students in different activities and funding. Some student organizations, apart from their own university funding, work actively with sponsors who gladly cooperate with them, because for employers it’s a direct access to potential future professionals.

In the end of a lively discussion, the participants of “round table” came to the conclusion that we have a lot of things to learn from each other, so we will work on organizing the experience exchange in two-way visits between student organizations of NULES and the University of Wageningen. The first steps to this will be the participation in the “Green Office Wageningen”, the environmental festival, which the NULES student organization will arrange in the end of April.

“Experience can never be excess”

Experience is never to be compared with our faculty student organizations. The last ones arrange events for students of a certain training program. The first steps to this will be the participation in the “Green Office Wageningen”, the environmental festival, which the NULES student organization will arrange in the end of April.

“Kto zdatnyi stallion”

When women are confident in men

St. Valentine’s Day is the most favorite holiday for lovers. This day one can demonstrate imagination, surprise his mate, express feelings and present a nice gift. Actually, everything that heart tells. Student organization of the department of biotechnology demonstrated this fact, having organized a gala party in the style of the TV show “My half will be alive” on February 14. Several pairs took part in it - a director of TSC of cultural, educational and social work D.K.Cherkashyn and the dean; F.D.Vedrui with their wives, students Ilyudnya Rakul and Maxym Bielinski, Olena Sotska and Dmytro Farenich. The game consisted of seven contests, where female participants entered stakes on their husbands. The highest rate decided whose man would participate in the competition. If he coped with it, his lady received all the chips, but if not - chips were divided among female rivals. The men wore headphones at the contest not to hear the tender conditions and not to prompt their beloved women what bet to make.

Contests were exciting and hilarious. One had to remember the flags of different countries, show one’s sportmanship, separate egg yolk and white, inflate and tie balloons, etc. D.K.Cherkashyn and Olga Anatoliivna, as well as Olena and Dmytro were the winners. The last rather complicated competition on precision and accuracy determined the winners those were a student couple! Players received nice symbolic prizes and were very happy, all those present got a lot of positive emotions and impressions.

During the traditional subject’s week of cycle commission of eco

spheric subject matters in the Boyarka College area, we, the National Resources a number of educational and cultural events were

The first fair was “Young Entrepreneur”, attended by all of the economics and management groups. Students had the opportunity to feel themselves the real entrepreneurs they were independent making up the name, motto and activity of their enterprise, the posters showed what costs incurred on the preparation and what future prospects are expected after selling goods. In the range of goods there was a large number of dishes prepared themselves. There were sweet pies and “varenyky”, cakes and pancakes, jeffy and pizza, suze and elish kebab, various sweets and many more delicious things…

Grand Prix of the fair for the creative idea of the suhi bar won a group of M-21 (curator - LV.Zhiryvenko). Presentation of the (WSI establish-

The great Goethe wrote, “He who would like to understand an artist, should come to his land”. This truth is unobjectionable. And when it comes about artists who were working under ground in conditions of persecutions and suppressions by KGB and other Soviet authorities, their consecrated lives showed sacrifice of pastoral ministry. Bishop Yakiv Tymchuk for 45 years of clerical and 53 years of monastic life tirelessly sowed a God’s seed in the people’s field even when the U.G. church was underground. His brother father Yaroslav survived persecutions and camps. His greatest merit was training young candidates for the priesthood and underground monks. Before leaving underground he was actually an underground seminary. Semi-

They treated everyone Georgian dishes - delicious lavash bread and barbecue, personally cooked in a wood near the college. Students entered the role perfectly well and successfully created Georgian atmosphere, joyfully invited and treated everyone.

The 2nd year students in profession “Evaluation Activities” won the second place (group OD-21, curator - K.B.Melnik) with the idea of “Sweet Dreams and Sweet Childhood”. Students prepared a facticated table of sweets, distinguished by an extraordinary brilliancy of colors and scents. The 3rd year students of specialty “Organization of Production” (group M-32, curators - R.V.Yakymovskyi) organized the company “Three Iv” (from the names of its founders - Hryvka, Hryvko, Herasymenko). They treated everyone Georgian dishes - delicious lavash bread and barbecue, personally cooked in a wood near the college. Students entered the role perfectly well and successfully created Georgian atmosphere, joyfully invited and treated everyone.

"Harmony" is the homemaker of college

The sorority "Orchid" has been working for five years at the Zalischyky Agricultural College after E.Khrapovych. It was an initiative of the head of women's club "Harmony" T.Ye.Melnychenko, a component of the university women's clubs.

Why is the name of "Orchid"? It's very simple. The orchid is a gift of God and the work of art, which fascinates us with its beauty. Its delicate aroma intox-
icates everyone who sees it. This flower is called the "artistocrat among the plants" Orchid is a healer. It's believed that it can cleanse and heal any organism. To ridicule and humble as much as resistant and hardy like every woman. That's why the womenfolk of the college decided to call their club "Orchid."

We started the work with creating the spirituality corner in the college. Today "Orchid" celebrates its first anniversary. During these five years a lot has been done. We visited many interesting places. There are Zaporizhian and Arman's hill in Chernivtsi region, the estate-museum of Ivan Mykolaichuk (village Chortoryia), Castle Medzhybizh in Romny region, parks "Alexandria" in Bila Tserkva and "Softivka" in "Ivan. We traveled by places, where lived and worked Shevchenko and on tourist rout "Golden Horseback of Chernivka region." In the educational field we visited our hometown National University of Life and Environmental Sciences of Ukraine, Chernivtsi National University and Myronivka Institute of wheat, exchanged experience in Makariv Agricultural College of Bila Tserka NAU and Shevchenkovsk College of Ukraine State Agrarian University, held several scientific and educational conferences. My colleagues are the active members of amateur folk song and dance ensemble "Khiblobody", whose performances you can see on the territory of our country and outside Ukraine.

Astrolgists claim that the Earth is entering the era of the Great femininity. The woman herself should rise spirituality for leading. Eternally stand words as woman and mother, woman-sister, woman-wife, woman, who solace, darling, patient and love. And who, if not a woman will bear the divine fire of love. Every day, every moment and always...

G. Glira, head of women's club "Orchid"

New Year is the new starts

The beginning of 2013 for uni-
versity athletes was tense. Al-
together, many of our teachers were quite successful in championship of Golostisy region among faculty in badminton, football in the gym, the table tennis, volleyball, swimming. Our team took the 3rd place in the team event. And sport life at the university also popped. So, the traditional sport day "Health" among teachers, teaching staff and staff in five kinds of sport in NUES of Ukraine took start. The competitions in volleyball, badminton and football already passed.

The feature of team competitions in chess, which was attended by seven teams was high psychological tension of fights and dual responsibility (for both personal and team results). The best were the representatives of the Institute of Land Resources and the Law, which took the 1st place, second and third places under the commands of head of the Department of Forestry and Landscape Architecture and Technical ERI. In the personal competition among males the 1st place won the representative team winner Zafir Kuzhu-
shev among women the winner became Iryny Khudyra, she is the rep-
resentative of technical ESI. The competition in vol-
leyball were more popular. They are participated by 11 teams. The winners are the athletes of Education and Research Institute of Plant Science, Environment and Biotechnology. Volleyball players of Technical ERI were the second and the third was ERC of cultural, educational and social work.

But the year has just begun and we are facing a lot of starts, the most important of which are the Olympics of Ukraine among faculties of agricul-
tural universities, which belong to the Ministry of Agrarian Policy and Food of Ukraine. I would like to recall that

...and grows a good harvest for the benefit of parents and the state. The women is better half of humanity (at least as many men say), they have always been and will remain its adornment, the center of attention. For the darling man is ready for the most decisive steps. And our womenfolk, in turn, takes this note with great appreciation. People's artist of Ukraine, sculptor and Professor of Cultural department Vadym Keysenko, his creative activity for many years closely associated with the university and the club "Harmony" knows that and he dedicated the members of our club the poem it would become the holiday gift for all women and "state" for men how to appreciate and honor their homemaker needs and sweethearts...

T.Ye.Melnychenko, chairman of the "Harmony" club associate professor of cultural studies

God the Almighty, bless a woman

Dedicated to a woman's club "Harmony" of NUES of Ukraine

Praised you are, dear women, You're like the flowers everywhere, The thoughts of God are said by women, And men would take them into their hearts. Close to women we are better, We have kindness in our souls, The eyes of women are in the skylight, And warmth of their eyes can melt the ice.

Lady is the mover of our actions, And let me say the clear truth, Bless, God, a woman, she is wonder, We love them for these miracles.

Vadym Keysenko
