# NATIONAL UNIVERSITY OF LIFE AND ENVIRONMENTAL SCIENCES OF UKRAINE

Department of General, Organic and Physical Chemistry

## APPROVED

Faculty of Engineering and Design

"\_\_\_\_\_\_\_2025

# CURRICULUM OF ACADEMIC DISCIPLINE \_\_\_\_\_\_\_\_\_\_

Area of knowledge <u>G Engineering, manufacturing and construction</u> Specialty <u>G19 Construction and Civil Engineering</u> Academic programme <u>Construction and Civil Engineering</u> Faculty (Education and Research Institute) <u>of Engineering and Design</u> Developed by: Associate Professor, PhD Victoria Krotenko, Associate Professor, PhD Roman Zhyla

# 

(up to 1,000 printed characters)

Chemistry is a fundamental discipline, which provides engineering students with a background in important concepts and principles of chemistry. Some of the most important objectives, though, are more globall in nature. Emphasis will be placed on those areas considered most relevant in a civil engineering context, and practical applications in construction and civil engineeringwill be examined. These goals deal with the overall relationship between chemistry (or science in general) and civil engineering rather than with the details of any particular chemical principle.

Area of knowledge, specialt	y, academic programme,	academic degree
Academic degree	Ì	Bachelor
Specialty	G19 – Constructi	on and Civil Engineering
Academic programme	<b>Construction</b>	and Civil Engineering
Charact	eristics of the discipline	
Туре	C	ompulsory
Total number of hours		120
Number of ECTS credits		4
Number of modules		3
Course project (work) (if any)		
Form of assessment		Exam
	ators of the discipline art-time forms of univers	ity study
		versity study
	Full-time	Part-time
Year of study	2025	2025
Term	1	1
Lectures	15 hours	6
Practical classes and seminars	30 hours	4
Laboratory classes	75 hours	110
Self-study		
Number of hours per week for full-time	3 hours	
students	5 hours	

## 2. Aim, competences and expected learning outcomes of the discipline

Aim to provide a solid foundation in the study of matter and its changes and to understand and apply basic chemistry concepts in branch engineering.

Learning outcomes of course is the student's ability as a future specialist:

- outlines the historical development of major principles, concepts and ideas in chemistry;
- describes applications of chemistry which affect society or the environment;
- explains trends and relationships between elements in terms of atomic structure, the periodic table and bonding;
- describes chemical changes in terms of energy inputs and outputs;
- compiles the different chemical reaction, describes factors that influence the type and rate of chemical reactions;
- relates the uses of carbon to the unique nature of carbon chemistry;
- applies simple electrochemical processes.

# Competences acquired:

**Integrated competency (IC):** The ability to solve complex specialized construction and civil engineering tasks in the learning process, which involves the application of a set of theories and methods for determining strength, stability, deformability, modeling, strengthening of building structures; further safe operation, reconstruction, construction and installation of buildings and engineering structures; application of automated design systems in the field of construction.

# General competencies (GC):

GC 1 – Ability to abstract thinking, analysis and synthesis.

GC 2 – Knowledge and understanding of the subject area and professional activity.

GC 6 – Ability to search, process and analyze information from various sources sources

GC 7 – Interpersonal skills.

# Professional (special) competences (SC):

SC1 – Ability to use conceptual scientific and practical

knowledge of mathematics, chemistry and physics to solve complex problems

practical problems in the field of construction and civil engineering.

# Expected learning outcomes (ELO):

**ELO** 1 – Apply basic theories, methods and principles

mathematical, natural, socio-humanitarian and economic

sciences, modern models, methods and software tools to support adoption solutions for solving complex construction and civil engineering problems engineering.

# 4. Topics of lectures

No.	Торіс	Hours
1	The main concepts and laws of chemistry	1
2	Atomic structure	1

3	The periodic law and Mendeleev's periodic table of chemical elements	1
4	The chemical bond and the structure of molecules	1
5	Thermodynamic laws of chemical transformations. Kinetics of chemical reactions	1
6	Properties of solutions of electrolytes and non-electrolytes. Electrolytic dissociation	1
7	The redox processes and their conditions	2
8	Fundamentals of electrochemistry. Chemical current sources	1
9	Electrolysis of melts and solutions of electrolytes as oxidation - reduction process	1
10	Properties of metals and their compounds in building materials	1
11	Corrosion processes and materials protection against corrosion	1
12	Bases of organic chemical compounds	2
13	Polymeric materials and their applications in engineering	1

# 5. Topic of laboratory (practical, seminars) classes

No.	Topic	Hours
1.	Introduction. Equipment and safety in chemical laboratory. Methods of	2
	chemical experiments.	2(0.5)
2.	Bases of modern nomenclature and classification of inorganic compounds.	2(0,5)
3.	The structure of the atom and Mendeleev's periodic law	2
4.	Determination of the types of chemical bonds between atoms in compounds. The relative electronegativity of atoms.	2(0,5)
5.	Determination of the thermal effect of the neutralization and dissolution of anhydrous salts.	2
6.	Calculation of kinetic parameters of the reaction according to the experiment.	2
7.	Determination of the conductivity of electrolyte solutions.	
	Indicator method of pH solutions calculation.	2(0,5)
8.	The preparation of solutions given concentration	2
9.	The properties of metals in redox reactions.	2
10.	The dependence of electromotive force from galvanic cells of metals.	2
11.	Investigation of electrolysis of aqueous solutions of electrolytes. The	2(0,5)
	calculations of the aount of substances using Faraday's law.	
12.	Determination of corrosion mass index rate.	2(0,5)
13.	The chemical properties of metals and their compounds.	2(0,5)
14.	The genetic link between the classes of organic compounds, the methods of	1(0,5)
	detection og organic compounds.	
15.	The properties of polymers. Introduction to methods of determining the quality of fuels.	2(0,5)

# 6. Topics of self-study

No.	Торіс	Hours
	Content Module 1. The basics atomic-molecular theory of the matter	structure
1.	Structure of molecules and methods of their research	2
2.	The importance of chemistry for the modern national economy	2
	and ecology	
3.	The main directions of chemicalization of the agro-industrial	2
	complex	
4.	Crystallization as a purification method	2
5.	From the craft of chemistry to chemical technology	2
6.	Allotropic modifications of Oxygen	2

7.	Basic concepts of chemistry	2
8.	The wonderful world of diamonds	2
9.	The main minerals of Ukraine	2
10.	The effect of radiation on living organisms: norms, doses,	2
	protection, problems	
11.	Chemical bond	1
12.	Chemistry and solution of raw material and energy deficit	2
13.	Agrochemistry is an interdisciplinary science.	1
14.	Biogeochemistry is a new branch of natural sciences	2
15.	Liquid crystals and their application prospects in industry	2
Conte	nt Module 2. Basic patterns of chemical processe	
1.	Chrome plating of metal structures	2
2.	Manganese-zinc galvanic elements	1
3.	Hydrogen energy. Application prospects	1
4.	Passivation of metals	1
5.	Prospects for the use of lithium-ion batteries	1
6.	Anti-corrosion coatings in construction.	1
7.	Catalytic and electrochemical processes	1
8.	Water. Water hardness	1
9.	Peculiarities of changes in the chemical composition of	2
	groundwater in the conditions of economic activity	
10.	Study of physical and chemical properties of drinking water	2
11.	Hydrolysis of salts	1
12.	Lead-acid batteries. Possibilities of use	1
13.	Non-polar solvents in construction	2
14.	Refining of metals	2
15.	Galvanostegia	2
16.	Electroplating	2
17.	Protective anodizing	2
18.	Electrochemical painting of metal parts	2
	nt Module 3. Chemistry of elements and compounds of elements that make	up the basis of
	nic and organic building materials	
1.	Polymers in structural materials	1
2.	Composite materials and their significance for the national	1
	economy	
3.	Important zinc compounds, structure and properties	1
4.	The importance of chemistry in the creation of new materials	1
5.	Copper and its alloys	1
6.	Deformable aluminum alloys	1
7.	The influence of technological additives on the structure and	1
	properties of rubber	
8.	Properties and applications of chromium and its compounds	1
9.	Nanotechnology. Development prospects	1
10.	Tin, its compounds and applications	1
11.	Polymethyl methacrylate. Plexiglass	1

12.	Non-ferrous metals and alloys	1
13.	Ceramics	1
14.	What is better - polymer or metal?	1
15.	Nanowires and other materials in the nanoworld	1
16.	Natural polymers in structural materials	1
17.	Alternative energy, development and prospects of implementation	1
18.	Calcium bioelement	1
19.	Coal and its processing products	1
20.	Natural, associated petroleum gas. Their composition. Oil	1

# 7. Methods of assessing expected learning outcomes:

# (select necessary or add)

- oral or written survey;
- interview;
- test;
- defending laboratory/practical, design/graphical works, projects;
- peer-to-peer assessment, self-assessment.

## Teaching methods (select necessary or add):

- problem-based method;
- practice oriented studying method;
- case method;
- project education method;
- flipped classroom, mixed education method;
- research based method;
- learning discussions and debates method;
- team work, brainstorm method
- gamification studying method.
- 8. Results assessment.

The student's knowledge is assessed by means of a 100-point scale converted into the national grades according to the "Exam and Credit Regulations at NULES of Ukraine" in force

nolecular theory of the matter structure ly basic theories, methods and principles ematical, natural, socio-humanitarian and nomic sciences, modern models, methods and software tools to support adoption utions for solving complex construction	15

Student's rating, points	National grading (exam/credits)
90-100	excellent
74-89	good
60-73	satisfactory
0-59	unsatisfactory

#### 8.2. Scale for assessing student's knowledge

#### 8.3. Assessment policy

Deadlines and exam retaking rules	<i>EXAMPLE:</i> works that are submitted late without valid reasons will be assessed with a lower grade. Module tests may be retaken with the permission of the lecturer if there are valid reasons (e.g. a sick leave).
Academic integrity	EXAMPLE: cheating during tests and exams is prohibited (including using mobile
rules	devices). Term papers and essays must have correct references to the literature used
Attendance rules	<i>EXAMPLE:</i> Attendance is compulsory. For good reasons (e.g. illness, international internship), training can take place individually (online by the faculty dean's consent)

## 9. Teaching and learning aids:

- e-learning course of the discipline

(https://elearn.nubip.edu.ua/course/view.php?id=1339) MANDATORY;

- references to digital educational resources;
- textbooks, manuals, tutorials;
- guidelines for studying a discipline by full-time and part-time students;
- internship programmes of the discipline (if included in the curriculum).
