VISIT TO SUMITEK UKRAINE COMPANY

On 26 April, 2024 the students of the training courses "Machines and equipment for bioenergy" and "Energy-ecological assessment of the constructions of bioenergy facilities" were acquainted with modern KOMATSU technologies. The visit was carried out to the „Sumitek Ukraine” company.

As part of the visit, the issues of the latest developments in the use of hydrogen to power the internal combustion engines of KOMATSU machines and the promotion solutions for zero-emission equipment were discussed.

ACTIVITY DURING THE VISIT

The educational tour included three locations: logistics innovations, production service and test drive.

The participants went through the stages of the values of the company „Sumitek Ukraine”: Safety, Trust, Team work, Continuous improvement, Stability, Enthusiasm. Thanks to the latest technologies in construction (including the building energy efficiency) and the development of KOMATSU equipment, the functionality of the EXTENDED LOAD-PILOT, EFFICIENCY TRAINER, SUPERVISION systems was revealed.

ACTIVITY DURING THE VISIT

PLANS FOR THE FUTURE

The participants of the event were enthralled by the demonstrations of modern equipment and advanced energy-efficient technologies involved in its production. In addition, specific methods of using this technique for the construction of energy-efficient structures for various purposes were illustrated quite well.

We believe that such an event allowed all participants to feel the extreme importance of energy-efficient technologies in the construction industry.
