

VET providers joint the Project

On April 1, the Educational and Research Institute of Energetics, Automatics and Energy Efficiency of National University of Life and Environmental Sciences of Ukraine held an Open Day for college graduates. About 70 future entrants visited us: from Berezhany Professional College, Kyiv Professional College of Urban Economy, Myroghoshcha Agricultural Professional College, Nizhyn Professional College, Nemyshaivo Professional College, Pryluky Technical Professional College, Tarashcha Technical and Economic and Legal College.

The participants of the event - teachers and college students - not only got acquainted with educational programs, laboratories of leading departments, but also received information about the Project **VET4GSEB - VET partnership for Green and Smart Electricity in Buildings**.

One of the tasks of the Project is to ensure national VET providers with training materials, tools and recommendations that will allow them to update their practices and training programs to meet the needs of the labor market in the construction and RES sectors.

We hope that our colleagues will actively join the Project, gain new knowledge and skills, which will generally contribute to the introduction of technological innovations and the improvement of the qualifications of specialists in the field of "green energy" in Ukraine.
