

In the reading room of the Pryluky Technical Professional College, a round table (on the occasion of the World Science Day) "THE FUTURE OF THE MIND: INNOVATIONS AND PROSPECTS" was held.

During the event, the participants have talked about the development of science in different historical periods, scientific discoveries that improved the lives of ordinary people, making it comfortable.

Olena Shelimanova, Associated Professor of the Department Power Systems Engineering, accompanied by presentation material, talked about the progress of the VET4GSEB project «VET partnership For Green and Smart Electricity in Buildings».

College teachers and graduate students have already been involved in some of the Project's activities, including a survey on the state of the renewable energy market in Ukraine and, in particular, issues related to the efficiency and quality of installation and maintenance of photovoltaic systems, and the skills needed to achieve this goal.

We hope, that representatives of the Pryluky Technical Professional College will be involved in the implementation of other tasks of the VET4GSEB project, which will contribute to the deepening of students' theoretical knowledge and the acquisition of practical skills in the installation and maintenance of solar installations.
