Invite you to

The International Scientific Conference

“The International Dimension of Cybersecurity”

The aim of the conference is to identify threats occurring in cyberspace, especially those limiting the performance of tasks by public entities. In view of the need to counteract them, it becomes important to create such a model of the cybersecurity system in which there will be appropriate protective barriers against such threats. Such a model should enable proper responding to the emerging threats to public order, security and defence, including those resulting from cyberattacks on ICT systems.
