

REVIEW
to the educational program "International Economics",
specialty 051 "Economics" field of knowledge 05 "Social and behavioral Sciences,"
of the second (master's) level of higher education
National University of Life and Environmental Sciences of Ukraine

Currently, in countries worldwide, including Ukraine, the labor market demands economists equipped with the skills and ability to rapidly adapt to the challenges and requirements of the international economy, analyze global agri-food markets, and develop strategies for integrating national economies into the global economic system. This is particularly relevant for sectors of the agricultural industry that focus on exports, attracting foreign investment, and managing international projects.

Accordingly, the development and launch of the educational program "International Economics" at the second (master's) level of higher education in the specialty 051 "Economics" is not only a justified but also a necessary step in shaping a new generation of specialists capable of addressing pressing issues in international economics and identifying pathways for economic development in the context of global competition.

The staffing of the educational and professional program possesses significant potential for conducting scientific research that aligns with the functional needs of the international economy. The academic and teaching staff actively collaborates with leading universities and organizations, ensuring a high level of training for students. Opportunities for internships and study abroad at partner institutions are available.

The program is designed to prepare specialists capable of analyzing economic processes based on artificial intelligence, assessing risks in economic activities, developing economic strategies for entering new agri-food markets, gaining experience in teamwork, thinking critically, fostering creativity, and establishing cross-cultural professional communication with a confident command of business foreign languages.

Graduates of the program, upon completion of their studies in the department, may pursue careers in positions such as economist, international trade economist, financial economist, foreign economic affairs consultant, pricing economist, and specialist in international economics.

It is worth noting that innovative teaching approaches, including interactive instructional methods, project-based learning, and the integration of digital technologies within the «AGMEMOD» research and training laboratory, will contribute to the development of essential competencies among students for successful professional careers.

Furthermore, it would be important to incorporate the courses "Big data analysis in international economics based on artificial intelligence" and "Artificial intelligence in international economics" into the educational program.

Given the above, the educational program "International economics" for the preparation of students at the second (master's) level of higher education in the specialty 051 "Economics", within the field of knowledge 05 "Social and Behavioral Sciences", is recommended for implementation in the educational process.
