

REVIEW

**to the educational program "International Economics",
specialty 051 "Economics" field of knowledge 05 "Social and behavioral Sciences",
of the second (master's) level of higher education
National University of Life and Environmental Sciences of Ukraine**

The modern labor market demonstrates a growing demand for economists capable of responding competently to the challenges and dynamics of the international economy, analyzing global agri-food markets, and developing strategies for the integration of national economies into the global system. This demand is particularly pronounced in agricultural sectors oriented toward exports, foreign investment attraction, and international project management. Therefore, the establishment of the Educational Program "International Economics" Specialty 051 "Economics" is not only a relevant but also a necessary initiative. It aims to shape a new generation of professionals capable of not only addressing current issues in international economics but also identifying pathways for economic development amid global competition. The academic staff supporting this program possess extensive experience in conducting research aligned with the functioning of the international economy. They actively collaborate with leading universities and organizations, ensuring a high level of student training and providing opportunities for internships and study abroad at partner higher education institutions.

The Educational Program "International Economics" at the second (master's) level of higher education has been developed in line with modern global economic trends and takes into account the labor market's demand for highly qualified professionals. The program is designed to cultivate systematic economic thinking in students, equipping them with the ability to analyze international economic processes, facilitate the integration of national economies into the global system, and effectively manage international projects. The program structure includes a set of mandatory and elective courses aimed at developing a high level of professional competencies in students. It is recommended for implementation in the educational process.
